Install a Rain Garden

**BENEFITS:**
- IMPROVE YOUR LANDSCAPE
- CONTROL RUNOFF
- RECEIVE FINANCIAL REIMBURSEMENT
- RECEIVE TECHNICAL ASSISTANCE
- PROTECT THE LOWER WASHOUGAL RIVER

**ENHANCE YOUR YARD**
Enhance curb appeal while removing pollution from our community’s river.

**CREATE A SANCTUARY**
Take a step away from your busy life into a relaxing garden retreat. Birds and butterflies will join you there.

**REDUCE MAINTENANCE**
Landscaping with native plants allows more time to enjoy your garden with less work.

Want to create beautiful gardens that filter pollution from your property?

Rain gardens add excitement to your landscape, help control runoff, and improve the quality of water draining from your property into the Washougal River. Designers can help you craft your rain garden location, size, and plant composition while incorporating your preferences for the overall landscape.

Receive reimbursement up to $1,600 per property to filter runoff from roofs and driveways, with native landscaping! Low maintenance rain gardens give you more time to enjoy your yard, attract beneficial pollinators, and help protect that Washougal all at the same time.
How much space will my rain garden take up?

It depends. Many factors, including soil type, the unique layout of your property, and the amount of lawn and impervious surfaces your property includes, influence the system’s size. We can help you determine the appropriate size and shape of your rain garden.

A well-designed rain garden can add interest to an otherwise monotonous lawn.

HIP-approved projects are easily combined with landscaping projects you might already be considering.

Rain gardens come in many shapes and sizes depending on the needs of your individual property. An established rain garden (left) collects and filters runoff.
